

<b>AEROSPACE RECOMMENDED PRACTICE</b>	<b>ARP573™</b>	<b>REV. E</b>
	Issued 1959-02 Revised 2001-10 Reaffirmed 2012-10 Stabilized 2022-08  Superseding ARP573D	
Silver, Copper, and Nickel Alloy Braze Joints for Aerospace Propulsion Systems		

**RATIONALE**

This document has been determined to contain basic and stable technology which is not dynamic in nature.

**STABILIZED NOTICE**

This document has been declared “STABILIZED” by SAE G-3, Aerospace Couplings, Fittings, Hose, Tubing Assemblies Committee and will no longer be subjected to periodic reviews for currency. Users are responsible for verifying references and continued suitability of technical requirements. Newer technology may exist.

SAE Executive Standards Committee Rules provide that: “This report is published by SAE to advance the state of technical and engineering sciences. The use of this report is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user.”

SAE reviews each technical report at least every five years at which time it may be revised, reaffirmed, stabilized, or cancelled. SAE invites your written comments and suggestions.

## 1. SCOPE:

This recommended practice covers design requirements for silver, copper and nickel brazed joints, primarily for tube connections, for aerospace propulsion systems. The environmental conditions stated herein, and those given in the applicable AMS specifications, provide the limitations of this ARP.

## 2. PURPOSE:

This ARP provides data for silver, copper, and nickel alloy brazed joints, based on sound engineering principles currently used throughout the aerospace propulsion systems industry, and provides a recommended practice for appropriate design configurations, engine and propeller standard utility parts, as applicable, and other propulsion systems components.

- 2.1 It further establishes a common standard practice for swaged tubing and a common standard for the inside diameter of the mating part of fittings for either silver, copper or nickel brazed joints. The purpose of establishing a common inside diameter for brazing applications is to facilitate manufacturing and to reduce the cost of related parts.

## 3. GENERAL REQUIREMENTS:

### 3.1 Applicable Specifications:

The AMS specifications mentioned herein should be complied with in all respects.

### 3.2 Material and Workmanship:

- 3.2.1 Materials: Materials should be of a quality which experience and tests have demonstrated to be suitable and dependable for aerospace propulsion systems.
