As a leading technology and solutions development organization, the Alliance for Telecommunications Industry Solutions (ATIS) brings together the top global ICT companies to advance the industry's most pressing business priorities. ATIS' nearly 200 member companies are currently working to address the All-IP transition, network functions virtualization, big data analytics, cloud services, device solutions, emergency services, M2M, cyber security, network evolution, quality of service, billing support, operations, and much more. These priorities follow a fast-track development lifecycle — from design and innovation through standards, specifications, requirements, business use cases, software toolkits, open source solutions, and interoperability testing.

ATIS is accredited by the American National Standards Institute (ANSI). The organization is the North American Organizational Partner for the 3rd Generation Partnership Project (3GPP), a founding Partner of the oneM2M global initiative, a member of and major U.S. contributor to the International Telecommunication Union (ITU), as well as a member of the Inter-American Telecommunication Commission (CITEL). For more information, visit www.atis.org.

The Industry Numbering Committee (INC) provides an open forum to address and resolve industry-wide issues associated with planning, administration, allocation, assignment and use of North American Numbering Plan (NANP) numbering resources within the NANP area.

This document is maintained under the direction of ATIS and the INC. Suggestions for improvement of this document are welcome. They should be sent to the Alliance for Telecommunications Industry Solutions, INC Staff, 1200 G Street NW, Suite 500, Washington, DC 20005. All changes to this document shall be made through the INC issue resolution process and adopted by the INC as set forth in the *ATIS Operating Procedures*.

Notice of Disclaimer & Limitation of Liability

The information provided in this document is directed solely to professionals who have the appropriate degree of experience to understand and interpret its contents in accordance with generally accepted engineering or other professional standards and applicable regulations. No recommendation as to products or vendors is made or should be implied.

NO REPRESENTATION OR WARRANTY IS MADE THAT THE INFORMATION IS TECHNICALLY ACCURATE OR SUFFICIENT OR CONFORMS TO ANY STATUTE, GOVERNMENTAL RULE OR REGULATION, AND FURTHER, NO REPRESENTATION OR WARRANTY IS MADE OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR AGAINST INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. ATIS SHALL NOT BE LIABLE, BEYOND THE AMOUNT OF ANY SUM RECEIVED IN PAYMENT BY ATIS FOR THIS DOCUMENT, AND IN NO EVENT SHALL ATIS BE LIABLE FOR LOST PROFITS OR OTHER INCIDENTAL OR CONSEQUENTIAL DAMAGES. ATIS EXPRESSLY ADVISES THAT ANY AND ALL USE OF OR RELIANCE UPON THE INFORMATION PROVIDED IN THIS DOCUMENT IS AT THE RISK OF THE USER.

<p>NOTE - The user's attention is called to the possibility that compliance with this standard may require use of an invention covered by patent rights. By publication of this standard, no position is taken with respect to whether use of an invention covered by patent rights will be required, and if any such use is required no position is taken regarding the validity of this claim or any patent rights in connection therewith. Please refer to [http://www.atis.org/legal/patentinfo.asp] to determine if any statement has been filed by a patent holder indicating a willingness to grant a license either without compensation or on reasonable and non-discriminatory terms and conditions to applicants desiring to obtain a license.</p>

9YY NXX Forms:

Attachment A, 9YY NXX Code Forms

Attachment B, Business Plan/Pre-Planning Checklist for Demonstration of Facilities Readiness for an Initial 9YY NXX Code

1.0 PURPOSE AND SCOPE

This document specifies guidelines for the assignment of NXX codes within the 9YY Service Access Code (SAC) and Numbering Plan Area (NPA) to service providers (SPs).

- 1.1 For the purpose of these assignment guidelines, unique NXX codes will be utilized within the 9YY SAC to identify the individual carriers for routing purposes. A SAC is a non-geographic NPA or Easily Recognizable Code (ERC) used for the purpose of providing access to a specific type of service. ERCs are sometimes referred to as “NYY” codes to signify that N = digits 2-9 and YY = repeating digits 0-9.¹
- 1.2 These guidelines are provided to accommodate a method which utilizes unique NXX codes within the 9YY SAC to identify individual SPs in order to allow multiple SPs 9YY access. This method requires an SP to 6-digit translate the 9YY NXX portion of a 9YY-NXX-XXXX² number in order to identify the carrier for call routing. Consequently, the assignment of individual NXX codes to specific SPs is required. The 9YY SAC may be accessed by dialing (1)+9YY-NXX-XXXX.³ As an option, use of 0+9YY-NXX-XXXX dialing may also be allowed for 9YY access. Use of the 101XXXX Carrier Access Code prefix is not consistent with NXX assignment and routing and is therefore not permitted.
- 1.3 These guidelines were developed by the industry consensus process by the Industry Numbering Committee.
- 1.4 These guidelines are expected to apply throughout the NANP serving area subject to the appropriate regulatory or governmental procedures and constraints.

2.0 BACKGROUND

The 900 SAC was first introduced in 1971 for information services in which the caller pays for call setup and the specific services associated with the 900 call. In 1986, NANPA issued the 900 NXX Assignment Guidelines in Advisory Letter, AL-86/07-006. The AL described the use of NXX codes to identify individual carriers for routing purposes and contained a set of procedures for obtaining NXX assignments. In 1996, the Industry Numbering Committee (INC) developed the 900 NXX assignment guidelines largely contained herein to replace the previous

¹ It should be noted that the INC has made the N11 NPAs (e.g. 211) not assignable, and has also reserved the N9X NPAs (where X = digits 0-9) for future NANP expansion purposes. See < www.nanpa.com > for further details. For practical purposes, YY is typically only repeating digits 0 and 2-8.

² N = digits 2-9 and X = digits 0-9.

³ This would not apply to those end user lines from which the subscriber has requested the blocking of all 9YY calls.
