GPHBD-1

EXECUTIVE COMMITTEE

2022–2023

OFFICERS:

PRESIDENT: Roger M. Millar, Washington State*

VICE PRESIDENT: Craig Thompson, Wisconsin**

SECRETARY–TREASURER: Russell McMurry, Georgia

EXECUTIVE DIRECTOR: Jim Tymon, Washington, DC

REGIONAL REPRESENTATIVES:

REGION I: Nicole Majeski, Delaware
Everett Lott, District of Columbia

REGION II: Vacant
Lorie Tudor, Arkansas

REGION III: Nancy Daubenberger, Minnesota
Jack Marchbanks, Ohio

REGION IV: Kristina Swallow, Nevada
Joel Jundt, South Dakota

IMMEDIATE PAST PRESIDENT: Shawn Wilson, Louisiana

* Elected at the 2022 Annual Meeting.

** Elected in January 2023 during a special Board of Directors meeting.

FOREWORD

The AASHTO *Guide to Preservation of Highway Bridge Decks* lists preservation treatments such as deck overlays, surface sealers and deck repairs that can extend the life of bridge decks in service. The Guide considers various deck types and the deck condition that can influence the selection of preservation treatments. The Guide presents the factors in deck capacity and durability that can influence the identification of candidates for deck preservation.

The Guide is for decks in fair or good condition with significant remaining service life. In the United States, there are 1.9 billion square feet of bridge deck in good condition and 2.2 billion square feet of bridge deck in fair condition. There are significant benefits in preservation to extend the service life of the good decks, and to delay the end of service for the fair decks.

The Guide is a collection of existing information. To develop the Guide, practices of U.S. state DOTs in selection of preservation treatments were reviewed. Procedures for application of treatments were collected. Data on performance of treatments were analyzed. Performance of a preservation treatment is measured by the years added to service life of decks due to treatment. Using existing information, the Guide presents a representative practice for deck preservation, general procedures for application of treatments, and, in examples of evaluation of costs and benefits, average performance of treatments.

The guide is a product of research directed by technical committee T-9, Bridge Preservation, of the AASHTO Committee on Bridges and Structures. Committee T-9 worked through the National Cooperative Highway Research Program to produce this Guide and a companion publication, the AASHTO *Guide to Bridge Preservation Actions*.

ACKNOWLEDGMENT

The AASHTO Committee on Bridges and Structures gratefully acknowledges the work of George Hearn, D.E.S, P.E., of the University of Colorado Boulder, for his role in research and composition of this Guide.

TABLE OF CONTENTS

SECTION 1: INTRODUCTION.....	1-1
1.1. General.....	1-1
1.2. Bridge Preservation of Bridge Decks.....	1-1
1.3. Preservation Candidates.....	1-2
1.4. Organization of the Guide.....	1-2
1.5. Audience for the Guide.....	1-3
1.6. Related Documents.....	1-3
1.7. Bridge Decks Addressed in the Guide.....	1-3
1.8. Application to the Guide.....	1-3
SECTION 2: PRESERVATION TREATMENTS FOR BRIDGE DECKS.....	2-1
2.1. Introduction.....	2-1
2.2. Typical Reinforced Concrete Decks of Highway Bridges.....	2-1
2.3.1. Protection vs Repair.....	2-3
2.3.2. Surface Sealers.....	2-3
2.3.3. Thin Polymer Overlay.....	2-4
2.3.4. Polyester Concrete Overlay.....	2-4
2.3.5. HMA+Membrane Overlay.....	2-5
2.3.5.1. Membrane, Liquid.....	2-6
2.3.5.2. Membrane, Preformed.....	2-6
2.3.6. Portland Cement Concrete Overlays.....	2-6
2.3.7. Repair of Spalls.....	2-7
2.3.8. Repairs to Cracks.....	2-8
2.3.9. Comparison.....	2-9
2.4. Deck Treatments, Appendix A.....	2-10
2.5. Treatments in Combination.....	2-11
SECTION 3: EVALUATION OF BRIDGE DECKS.....	3-1
3.1. Introduction.....	3-1
3.2. Data on Condition of Bridge Decks.....	3-1
3.3. Defects and Treatments.....	3-4
3.4. Evaluation of Bridge Decks.....	3-4
3.4.1. Methods of Bridge Deck Inspection.....	3-4
3.5. Compromised Area of Bridge Decks.....	3-7
3.6. Reports.....	3-8
SECTION 4: SELECTING PRESERVATION TREATMENTS FOR BRIDGE DECKS.....	4-1
4.1. Introduction.....	4-1
4.2. Preserve or Replace?.....	4-1
4.3. Selection of Treatment.....	4-1
4.3.1. Non-Preservation Treatments.....	4-4
4.4. Extent of Treatment.....	4-4
4.5. Treatments and Condition of Bridge Decks.....	4-4
SECTION 5: COSTS AND BENEFITS OF DECK PRESERVATION.....	5-1
5.1. Introduction.....	5-1
5.2. Preservation-Cycle Cost Analysis.....	5-1
5.2.1. Untreated Bridge Deck.....	5-1

5.2.2. Treated Bridge Deck	5-2
5.3. Examples in Costs and Benefits of Deck Treatments.....	5-3
5.3.1. Limitation to Examples	5-3
5.3.2. Base Case—Cost of Deck Service without Treatment.....	5-3
5.3.3. Example 1: Use of Thin Polymer Overlay on a Bridge Deck in Good Condition	5-3
5.3.4. Example 2: Reapplication of Thin Polymer Overlay on a Bridge Deck in Good Condition.....	5-5
5.3.5. Example 3: Use of a PCC Overlay on a Deck in Fair Condition	5-6
5.3.6. Example 4: Use of a PCC Overlay on a Deck in Poor Condition	5-7
5.3.7. Summary of Examples 1 through 4.....	5-8

SECTION 1

INTRODUCTION

1.1. GENERAL

This is a Guide to preservation of highway bridge decks.

Preservation is a program of treatments applied to bridge decks in service to keep bridge decks in good or fair condition.

Treatments are the materials and actions used to protect or repair bridge decks. Many treatments are intended to protect bridge decks from ingress of chloride ion and from freeze–thaw damage.

This Guide lists treatments for bridge decks, provides procedures for treatments, relates treatments to conditions of bridge decks, reviews methods of evaluation of bridge decks, and presents examples in evaluation of costs and benefits of treatments. Most of the content of the Guide is directed at reinforced concrete bridge decks.

Preservation of bridge decks is one task in the overall preservation of highway bridges. Preservation of highway bridges is addressed in the *Guide to Bridge Preservation Actions* (AASHTO, 2021b).

1.2. PRESERVATION OF BRIDGE DECKS

Preservation of bridge decks is a program of treatments intended to

- Extend service life of bridge decks,
- Keep bridge decks in good or fair condition, and
- Reduce life-cycle costs.

Treatments include surface sealers, overlays, and waterproofing membranes with wearing course. The application of treatments often includes repairs to cracks, spalls, and delaminations.

C1.1.

This Section introduces the content and organization of the Guide.

Treatments are means of preserving bridge decks in service.

C1.2.

Preservation is one part of the program for highway bridges of a transportation agency. The bridge program includes a capital program for bridge rehabilitation and replacement, plus a preservation program for bridge protection and repair. Similar categories are applied to bridge decks. Protection and repair of decks are within preservation programs. Deck replacements are beyond preservation programs.

Programs for bridge preservation establish boundaries on the population of bridge decks that are candidates for preservation, and on the actions that are preservation treatments.

Preservation treatments include protection and repair of existing bridge decks. Projects to improve, replace, or construct bridge decks are beyond the intended scope of a deck preservation program.

Preservation treatments delay or slow deterioration in bridge decks.

Funds available to transportation agencies are limited, and there is competition among needs in preservation, restoration, replacement, capacity expansion, and new construction. Preservation programs are manageable when a defined population of structures is addressed. Preservation programs exist within an agency when decisions in allocation of funds are taken at the program level rather than the project level.
