

AEROSPACE MATERIAL SPECIFICATION	AMS2469™	REV. K
	Issued 1962-06 Revised 2022-08	
Superseding AMS2469J		
Hard Anodic Coating on Aluminum and Aluminum Alloys		

RATIONALE

AMS2469K results from a Five-Year Review and update of this specification: added ordering information, added electrical contact points per general agreement (3.1.2), added features not allowed to be anodized to masking (3.1.3), added allowable final rinse (3.2.1), added that cog shall specify or approve of specific sealing solutions (3.2.2), changed “cold” rinse to “not exceeding 120 °F” (3.2.1), added touch-up allowance as in similar specifications (3.2.3), added allowance for dimensional gauging of thickness (3.3.1.1), clarified coating weight requirement (3.3.2), updated abrasion resistance requirements (3.3.4), added standard wording regarding suspension of periodic testing (4.2.2.1), updated approval wording (4.4.1), updated control factors (4.4.3), updated precaution notes (8.2), and added note regarding water for make-up and replenishment.

NOTICE

ORDERING INFORMATION: The following information shall be provided to the processor by the purchaser.

- Purchase order shall specify not less than the following:
 - AMS2469K
 - Anodize thickness and tolerance, other than 0.0020, ±0.0005 inch (3.3.1)
 - Basis metal alloy group to be anodized or material specification
 - Lot acceptance testing, thickness, coating weight or both (4.2.1)
 - Optional: Sealing and the sealing solution to be used (3.2.2 and 8.2.7)
 - Optional: Fixture/electrical contact locations, when not specified (3.1.2)
 - Special features, geometry or processing present on parts that requires special attention by the processor
 - Part number and quantity of pieces to be anodized
- Parts manufacturing operations such as heat treating, forming, joining and media finishing performed before anodizing can affect the condition of the substrate and if performed after anodizing, can adversely affect the finished part. The sequencing of these types of operations should be specified by the cognizant engineering organization or purchaser and is not controlled by this specification.

SAE Technical Standards Board Rules provide that: “This report is published by SAE to advance the state of technical and engineering sciences. The use of this report is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user.”

SAE reviews each technical report at least every five years at which time it may be revised, reaffirmed, stabilized, or cancelled. SAE invites your written comments and suggestions.

1. SCOPE

1.1 Purpose

This specification establishes the requirements for a hard anodic coating on aluminum and aluminum alloys.

1.2 Application

This process has been used typically to increase, by formation of a dense aluminum oxide, surface hardness and resistance to abrasion and corrosion of aluminum and aluminum alloy parts containing, in general, less than 5% copper or 8% silicon or a total of 8% of both, but usage is not limited to such applications. Alloys with higher alloy content can be coated satisfactorily with proper precautions in processing. Careful consideration should be given when using this process on highly-stressed parts because of the resultant marked lowering of fatigue life performance and on parts with sharp corners and edges where chipping may result.

1.3 Safety - Hazardous Materials

While the materials, methods, applications, and processes described or referenced in this specification may involve the use of hazardous materials, this specification does not address the hazards which may be involved in such use. It is the sole responsibility of the user to ensure familiarity with the safe and proper use of any hazardous materials and to take necessary precautionary measures to ensure the health and safety of all personnel involved.

2. APPLICABLE DOCUMENTS

The issue of the following documents in effect on the date of the purchase order forms a part of this specification to the extent specified herein. The supplier may work to a subsequent revision of a document unless a specific document issue is specified. When the referenced document has been cancelled and no superseding document has been specified, the last published issue of that document shall apply.
