

Design of steel structures

Legal Notice for Standards

Canadian Standards Association (operating as “CSA Group”) develops standards through a consensus standards development process approved by the Standards Council of Canada. This process brings together volunteers representing varied viewpoints and interests to achieve consensus and develop a standard. Although CSA Group administers the process and establishes rules to promote fairness in achieving consensus, it does not independently test, evaluate, or verify the content of standards.

Disclaimer and exclusion of liability

This document is provided without any representations, warranties, or conditions of any kind, express or implied, including, without limitation, implied warranties or conditions concerning this document’s fitness for a particular purpose or use, its merchantability, or its non-infringement of any third party’s intellectual property rights. CSA Group does not warrant the accuracy, completeness, or currency of any of the information published in this document. CSA Group makes no representations or warranties regarding this document’s compliance with any applicable statute, rule, or regulation.

IN NO EVENT SHALL CSA GROUP, ITS VOLUNTEERS, MEMBERS, SUBSIDIARIES, OR AFFILIATED COMPANIES, OR THEIR EMPLOYEES, DIRECTORS, OR OFFICERS, BE LIABLE FOR ANY DIRECT, INDIRECT, OR INCIDENTAL DAMAGES, INJURY, LOSS, COSTS, OR EXPENSES, HOWSOEVER CAUSED, INCLUDING BUT NOT LIMITED TO SPECIAL OR CONSEQUENTIAL DAMAGES, LOST REVENUE, BUSINESS INTERRUPTION, LOST OR DAMAGED DATA, OR ANY OTHER COMMERCIAL OR ECONOMIC LOSS, WHETHER BASED IN CONTRACT, TORT (INCLUDING NEGLIGENCE), OR ANY OTHER THEORY OF LIABILITY, ARISING OUT OF OR RESULTING FROM ACCESS TO OR POSSESSION OR USE OF THIS DOCUMENT, EVEN IF CSA GROUP HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, INJURY, LOSS, COSTS, OR EXPENSES.

In publishing and making this document available, CSA Group is not undertaking to render professional or other services for or on behalf of any person or entity or to perform any duty owed by any person or entity to another person or entity. The information in this document is directed to those who have the appropriate degree of experience to use and apply its contents, and CSA Group accepts no responsibility whatsoever arising in any way from any and all use of or reliance on the information contained in this document.

CSA Group is a private not-for-profit company that publishes voluntary standards and related documents. CSA Group has no power, nor does it undertake, to enforce compliance with the contents of the standards or other documents it publishes.

Intellectual property rights and ownership

As between CSA Group and the users of this document (whether it be in printed or electronic form), CSA Group is the owner, or the authorized licensee, of all works contained herein that are protected by copyright, all trade-marks (except as otherwise noted to the contrary), and all inventions and trade secrets that may be contained in this document, whether or not such inventions and trade secrets are protected by patents and applications for patents. Without limitation, the unauthorized use, modification, copying, or disclosure of this document may violate laws that protect CSA Group’s and/or others’ intellectual property and may give rise to a right in CSA Group and/or others to seek legal redress for such use, modification, copying, or disclosure. To the extent permitted by licence or by law, CSA Group reserves all intellectual property rights in this document.

Patent rights

Attention is drawn to the possibility that some of the elements of this standard may be the subject of patent rights. CSA Group shall not be held responsible for identifying any or all such patent rights. Users of this standard are expressly advised that determination of the validity of any such patent rights is entirely their own responsibility.

Authorized use of this document

This document is being provided by CSA Group for informational and non-commercial use only. The user of this document is authorized to do only the following:

If this document is in electronic form:

- load this document onto a computer for the sole purpose of reviewing it;
- search and browse this document; and
- print this document if it is in PDF format.

Limited copies of this document in print or paper form may be distributed only to persons who are authorized by CSA Group to have such copies, and only if this Legal Notice appears on each such copy.

In addition, users may not and may not permit others to

- alter this document in any way or remove this Legal Notice from the attached standard;
- sell this document without authorization from CSA Group; or
- make an electronic copy of this document.

If you do not agree with any of the terms and conditions contained in this Legal Notice, you may not load or use this document or make any copies of the contents hereof, and if you do make such copies, you are required to destroy them immediately. Use of this document constitutes your acceptance of the terms and conditions of this Legal Notice.

Canadian Standards Association (operating as “CSA Group”), under whose auspices this National Standard has been produced, was chartered in 1919 and accredited by the Standards Council of Canada to the National Standards system in 1973. It is a not-for-profit, nonstatutory, voluntary membership association engaged in standards development and certification activities.

CSA Group standards reflect a national consensus of producers and users — including manufacturers, consumers, retailers, unions and professional organizations, and governmental agencies. The standards are used widely by industry and commerce and often adopted by municipal, provincial, and federal governments in their regulations, particularly in the fields of health, safety, building and construction, and the environment.

Individuals, companies, and associations across Canada indicate their support for CSA Group’s standards development by volunteering their time and skills to Committee work and supporting CSA Group’s objectives through sustaining memberships. The more than 7000 committee volunteers and the 2000 sustaining memberships together form CSA Group’s total membership from which its Directors are chosen. Sustaining memberships represent a major source of income for CSA Group’s standards development activities.

CSA Group offers certification and testing services in support of and as an extension to its standards development activities. To ensure the integrity of its certification process, CSA Group regularly and continually audits and inspects products that bear the CSA Group Mark.

In addition to its head office and laboratory complex in Toronto, CSA Group has regional branch offices in major centres across Canada and inspection and testing agencies in eight countries. Since 1919, CSA Group has developed the necessary expertise to meet its corporate mission: CSA Group is an independent service organization whose mission is to provide an open and effective forum for activities facilitating the exchange of goods and services through the use of standards, certification and related services to meet national and international needs.

Standards Council of Canada
Conseil canadien des normes

A National Standard of Canada is a standard developed by a Standards Council of Canada (SCC) accredited Standards Development Organization, in compliance with requirements and guidance set out by SCC. More information on National Standards of Canada can be found at www.scc.ca.

SCC is a Crown corporation within the portfolio of Innovation, Science and Economic Development (ISED) Canada. With the goal of enhancing Canada's economic competitiveness and social well-being, SCC leads and facilitates the development and use of national and international standards. SCC also coordinates Canadian participation in standards development, and identifies strategies to advance Canadian standardization efforts.

Accreditation services are provided by SCC to various customers, including product certifiers, testing laboratories, and standards development organizations. A list of SCC programs and accredited bodies is publicly available at www.scc.ca.

3.1 Definitions	28
3.2 Symbols	31
3.3 Units	39
4 Structural documents	39
4.1 General	39
4.2 Structural design documents	39
4.3 Fabrication and erection documents	40
4.3.1 Connection design details	40
4.3.2 Shop details	40
4.3.3 Erection diagrams	41
4.3.4 Erection procedures	41
4.3.5 Fieldwork details	41
5 Material — Standards and identification	41
5.1 Standards	41
5.1.1 General	41
5.1.2 Strength levels	41
5.1.3 Structural steel	42
5.1.4 Sheet steel	42
5.1.5 Cast steel	42
5.1.6 Forged steel	42
5.1.7 Bolts and bolt assemblies	42
5.1.8 Welding electrodes	42
5.1.9 Studs	42
5.1.10 Anchor rods	42
5.2 Identification	42
5.2.1 Methods	42
5.2.2 Unidentified structural steel	43
5.2.3 Tests to establish identification	43
5.2.4 Affidavit	43

6	Design requirements	43
6.1	General	43
6.1.1	Limit states	43
6.1.2	Structural integrity	43
6.2	Loads	44
6.2.1	Specified loads	44
6.2.2	Importance factors based on use and occupancy	44
6.3	Requirements under service loads	44
6.3.1	Deflection	44
6.3.2	Camber	44
6.3.3	Dynamic effects	45
6.3.4	Resistance to fatigue	45
6.4	Requirements under factored loads	45
6.4.1	Strength	45
6.4.2	Overturning	45
6.5	Expansion and contraction	45
6.6	Corrosion protection	45
6.7	Requirements under fire conditions	46
6.8	Brittle fracture	46
6.9	Requirements under impulse loading	46
7	Factored loads and safety criteria	47
7.1	Safety during erection and construction	47
7.2	Safety criteria and effect of factored loads for the ultimate limit states	47
8	Analysis of structure	47
8.1	General	47
8.2	Types of construction	47
8.2.1	General	47
8.2.2	Rigidly connected and continuous construction	47
8.2.3	Simple construction	48
8.2.4	Semi-rigid (partially restrained) construction	48
8.3	Analysis methods	48
8.3.1	Elastic analysis	48
8.3.2	Inelastic analysis	48
8.3.3	Plastic analysis	49
8.4	Design for structure stability	50
8.4.1	Stability requirements	50
8.4.2	Methods of analysis and design for stability	50
8.4.3	Simplified stability analysis method	50
9	Bracing of members	51
9.1	Initial misalignment at brace point	51
9.2	Displacement of bracing systems	52
9.3	Function of bracing	52
9.4	Twisting and lateral displacements	52
9.5	Simplified analysis	52
9.6	Detailed analysis	52
9.6.1	Second-order method	52

9.6.2	Direct method	52
9.7	Slabs or decks	53
9.8	Accumulation of forces	53
9.9	Torsion	53
10	Design lengths and slenderness ratios	53
10.1	Simple span flexural members	53
10.2	Continuous span flexural members	54
10.3	Members in compression	54
10.3.1	General	54
10.3.2	Failure mode involving bending in-plane	54
10.3.3	Failure mode involving buckling	54
10.4	Slenderness ratios	54
10.4.1	General	54
10.4.2	Maximum slenderness ratio	55
11	Width (or diameter)-to-thickness — Elements in compression	55
11.1	Classification of sections	55
11.2	Maximum width (or diameter)-to-thickness ratios of elements subject to compression	55
11.3	Width and thickness	56
12	Gross and net areas	56
12.1	Application	56
12.2	Gross area	57
12.3	Net area	57
12.3.1	General	57
12.3.2	Allowance for bolt holes	57
12.3.3	Effective net area — Shear lag	57
12.3.4	Angles and channels	59
12.3.5	Plug or slot welds	59
12.4	Pin-connected members in tension	59
12.4.1	Effective net areas	59
12.4.2	Detail requirements	59
13	Member and connection resistance	59
13.1	Resistance factors	59
13.2	Axial tension	60
13.3	Axial compression	60
13.3.1	Flexural, torsional, or flexural-torsional buckling	60
13.3.2	Single-angle members in compression	61
13.3.3	Segmented members in compression	62
13.3.4	Members in compression subjected to elastic local buckling	63
13.4	Shear	63
13.4.1	Webs of flexural members with two flanges	63
13.4.2	Plastic analysis	65
13.4.3	Webs of flexural members not having two flanges	65
13.4.4	Pins	65
13.4.5	Gusset plates and coped beams	65
13.5	Bending — Laterally supported members	65

13.6	Bending — Laterally unsupported members	67
13.6.1	General construction	67
13.6.2	Gerber construction	71
13.7	Lateral bracing for members in structures analyzed plastically	71
13.8	Axial compression and bending	72
13.8.1	General	72
13.8.2	Member strength and stability — Class 1 and Class 2 sections of I-shaped members	72
13.8.3	Member strength and stability — Class 1 and Class 2 sections of square and circular HSS members	73
13.8.4	Member strength and stability — All classes of sections except members within the scope of Clause 13.8.2 or 13.8.3	74
13.8.5	Value of U_1	74
13.8.6	Values of ω_1	74
13.9	Axial tension and bending	75
13.9.1	Axial tension and bending — General members	75
13.9.2	Axial tension and bending — Class 1 and Class 2 sections of I-shaped members	75
13.9.3	Axial tension and bending — Laterally unsupported members	75
13.10	Load bearing	75
13.11	Block shear — Tension member, beam, and plate connections	76
13.12	Bolts and local connection resistance	76
13.12.1	Bolts in bearing-type connections	76
13.12.2	Bolts in slip-critical connections	78
13.13	Welds	78
13.13.1	General	78
13.13.2	Shear	78
13.13.3	Tension normal to axis of weld	79
13.13.4	Compression normal to axis of weld	80
13.14	Welds and high-strength bolts in combination	80

14 Beams and girders 81

14.1	Proportioning	81
14.2	Flanges	82
14.3	Webs	82
14.3.1	Maximum slenderness	82
14.3.2	Web yielding and crippling	83
14.3.3	Openings	83
14.3.4	Effect of thin webs on moment resistance	84
14.4	Bearing stiffeners	84
14.5	Intermediate transverse stiffeners	85
14.6	Combined shear and moment	86
14.7	Rotational restraint at points of support	86
14.8	Copes	86
14.9	Lateral forces	86
14.10	Torsion	86

15 Trusses 87

15.1	Analysis	87
15.1.1	Simplified method	87
15.1.2	Detailed method	87

- 15.2 General requirements 87
- 15.2.1 Effective lengths of compression members 87
- 15.2.2 Connection eccentricities 88
- 15.2.3 Stability 88
- 15.2.4 Chord members 88
- 15.2.5 Web members 88
- 15.2.6 Compression chord supports 88
- 15.2.7 Maximum slenderness ratio of tension chords 88
- 15.2.8 Deflection and camber 88
- 15.3 Composite trusses 88

16 OWSJs 88

- 16.1 Scope 88
- 16.2 General 89
- 16.3 Materials 89
- 16.4 Design documents 89
 - 16.4.1 Building structural design documents 89
 - 16.4.2 Joist design documents 89
- 16.5 Design 90
 - 16.5.1 Loading for OWSJs 90
 - 16.5.2 Design assumptions 90
 - 16.5.3 Member and connection resistance 90
 - 16.5.4 Width-to-thickness ratios 90
 - 16.5.5 Bottom chord 91
 - 16.5.6 Top chord 91
 - 16.5.7 Webs 93
 - 16.5.8 Spacers and battens 93
 - 16.5.9 Connections and splices 93
 - 16.5.10 Bearings 94
 - 16.5.11 Anchorage 94
 - 16.5.12 Deflection 95
 - 16.5.13 Camber 95
 - 16.5.14 Vibration 95
 - 16.5.15 Welding 95
- 16.6 Stability during construction 95
- 16.7 Bridging 96
 - 16.7.1 General 96
 - 16.7.2 Installation 96
 - 16.7.3 Types 96
 - 16.7.4 Diagonal bridging 96
 - 16.7.5 Horizontal bridging 96
 - 16.7.6 Attachment of bridging 96
 - 16.7.7 Anchorage of bridging 96
 - 16.7.8 Bridging systems 96
 - 16.7.9 Spacing of bridging 96
- 16.8 Decking 97
 - 16.8.1 Decking to provide lateral support 97
 - 16.8.2 Deck attachments 97
 - 16.8.3 Diaphragm action 97

16.8.4	Cast-in-place slabs	97
16.8.5	Installation of steel deck	97
16.9	Shop coating	98
16.10	Manufacturing tolerances	98
16.11	Inspection and quality control	99
16.11.1	Inspection	99
16.11.2	Identification and control of steel	99
16.11.3	Quality control	99
16.12	Handling and erection	99
16.12.1	General	99
16.12.2	Erection tolerances	99
17	Composite beams, trusses, and OWSJs	100
17.1	Application	100
17.2	Definitions	100
17.3	General	101
17.3.1	Deflections	101
17.3.2	Vertical shear	102
17.3.3	End connections	102
17.3.4	Steel deck	102
17.4	Design effective width of concrete	102
17.5	Slab reinforcement	102
17.5.1	General	102
17.5.2	Parallel reinforcement	103
17.5.3	Transverse reinforcement — Concrete slab on metal deck	103
17.5.4	Transverse reinforcement — Ribbed slabs	103
17.6	Interconnection	103
17.7	Shear connectors	104
17.7.1	General	104
17.7.2	End-welded studs	104
17.7.3	Channel connectors	105
17.8	Ties	105
17.9	Design of composite beams with shear connectors	105
17.10	Design of composite beams without shear connectors	108
17.11	Unshored beams	108
17.12	Beams during construction	108
18	Composite columns	108
18.1	Resistance prior to composite action	108
18.2	Concrete-filled hollow structural sections	109
18.2.1	General	109
18.2.2	Compressive resistance	109
18.2.3	Bending resistance	110
18.2.4	Axial compression and bending	111
18.3	Partially encased composite columns	111
18.3.1	General	111
18.3.2	Compressive resistance	112
18.3.3	Bending resistance	113
18.3.4	Axial compression and bending	113

18.3.5	Special reinforcement for seismic zones	113
18.4	Encased composite columns	114
18.4.1	General	114
18.4.2	Compressive resistance	114
18.4.3	Reinforcement	114
18.4.4	Columns with multiple steel shapes	115
18.4.5	Load transfer	115
18.4.6	Bending resistance	115
19	Built-up members	115
19.1	General	115
19.2	Members in compression	115

Preface

This is the ninth edition of CSA S16, *Design of steel structures*. It supersedes the previous limit states editions published in 2014, 2009, 2001, 1994, 1989, 1984, 1978, and 1974. These limit states design editions were preceded by seven working stress design editions published in 1969, 1965, 1961, 1954, 1940, 1930, and 1924. The 1969 working stress design edition was withdrawn in 1984, from which point the design of steel structures in Canada has been carried out using limit states design principles.

The following are the major changes to this edition:

- a) Minor changes were made to the Scope to bring it into line with the Terms of Reference for CSA Technical Committee on Design of Steel Structures (A263).
- b) Defined terms were unified and others added to improve clarity in interpreting the intent of the Standard. The consistent term “engineer” replaces occurrences of “designer”, “structural engineer”, “structural designer”, and “building designer” when intended to have the same meaning. The term “structural documents” is clarified and expanded to include models.
- c) High-strength bolts are referenced using ASTM F3125/F3125M.
- d) A more consistent distinction is made between specified (unfactored) and service (for assessing serviceability limit states) loads.
- e) Inelastic analysis has been included as a defined analytical method with reference to new Annex [O](#), which provides guidance for advanced structural analysis techniques.
- f) Additional guidance is provided for stability analysis and design, also with a link to Annex [O](#).
- g) The factor U_2 , accounting for P- Δ effects in frames, is expanded to account for load in columns of moment frames.
- h) Width-to thickness class criteria have been added for multi-sided hollow sections and singly-symmetric I-sections. Wording in Tables [1](#) and [2](#) has been clarified.
- i) The provisions for designing doubly-symmetric compression members have been restructured and condensed, in part to emphasise that torsional buckling should be considered, but there is no resulting change to the intent.
- j) Provisions have been added for designing single angles as beams.
- k) Wording has been improved pertaining to lateral-torsional buckling of doubly-symmetric beams with top flange loading.
- l) Limits have been placed on the approximate equation for the parameter β_x used in the design of laterally unsupported singly-symmetric beams, notably to exclude T-sections.
- m) Provisions have been added for designing built-in cantilevers, and general guidance is now included for the Gerber (cantilever and suspended span) roof system.
- n) Use of HSS members as beam-columns is now explicitly supported.
- o) The provisions for members in combined tension and bending have been expanded to include instances of biaxial bending and benefits for ductile behaviour.
- p) Slip parameters are provided for hot-dip galvanized and metalized surfaces in Table [3](#) to reflect new test data.
- q) Some modifications to the design provisions for fillet welds have been included to better address the effects of weld groups with welds in multiple orientations and welds for HSS.
- r) The Standard now better accounts for the effects on flexural capacity of fastener holes in beams.
- s) Provisions for accounting for the effect of thin webs on moment resistance and that of combined shear and moment have been improved.
- t) Minor modifications have been made to the provisions for the design of plate walls for non-seismic loads.

- u) A minimum design force has been specified for moment-connection stiffeners to reflect new research recommendations.
- v) An interaction equation based on plasticity theory has been added for compact connection elements subjected to combined loads to reflect new research recommendations.
- w) A detailed list of potential limit states has been included specifically for HSS connections.
- x) The various types of bolt holes for imperial and metric bolts have been clarified using Table 5, which has also incorporated larger hole sizes for larger bolts, in part to accommodate ASTM upper diameter tolerances.
- y) Provisions have been added related to fatigue resistance of stud shear connectors.
- z) Seismic design has been addressed by the new standard for two new systems: moderately-ductile plate walls (Clause 27.10) and moderately-ductile truss moment-resisting frames (Annex L).
- aa) Seismic design “triggers” requiring more ductile detailing where the seismic loads are greater have been defined by a series of five seismic categories based on the worst condition of short and long period cases. Throughout Clause 27 the detailing requirements now relate to these seismic categories rather than $I_E F_a S_a(0.2)$.
- ab) Additional guidance is provided on multi-tiered bracing in which braces stack but do not have a diaphragm at the top and bottom of each bracing level.
- ac) The Standard now requires that when using ASTM A500 material in seismic braces the nominal section properties be used for determining probable resistance, as using the reduced wall thickness might underestimate the forces on adjacent elements in the system.
- ad) Additional guidance is provided for determining the seismic foundation rotations in accordance with NBC and CSA A23.3 and the concept and definitions for nominal overturning resistance are introduced.
- ae) Additional guidance and clarity have been included for special seismic design to address systems not explicitly included as part of the NBC and Clause 27, with reference to Annex O for advanced analysis.
- af) Material has been added pertaining to responsibilities and quality control for welding inspection.
- ag) Provisions for control of brittle fracture have been moved in their entirety from an annex to the main body of the standard and updated to reflect current knowledge. Tables 11 to 15 have been added to provide Charpy V-notch impact energy and other related requirements.
- ah) Annex K has been updated to reflect current knowledge on design for fire conditions, notably pertaining to utilization of membrane action and performance evaluation of individual members at elevated temperatures.
- ai) Annex N has been developed considerably from the previous edition to bring the design of storage racks into compliance with the remainder of the Standard. Provisions for the design of selective-type storage racks consisting of concentrically braced frames in the down-aisle direction, racks with recessed legs, rack column splices, and welded wire rack decking, are included. Displacement-based seismic analysis and design is now explicitly permitted in the cross-aisle direction. Documentation and certification requirements for rack structures have been expanded.
- aj) A new Annex P on third-party inspection has been included to provide guidance on what are deemed to be effective, yet reasonable, inspection requirements for steel structures.

A commentary on this Standard, prepared by the Canadian Institute of Steel Construction with contributions from many members of the Technical Committee, comprises Part 2 of the Institute’s *Handbook of Steel Construction*.

This Standard is intended to be used with the provisions of the 2020 edition of the *National Building Code of Canada (NBC)*, specifically Clause 7, which references the NBC for load factors, load combinations, and other loading provisions.

This Standard was prepared by the Technical Committee on Steel Structures for Buildings, under the jurisdiction of the Strategic Steering Committee for Construction and Civil Infrastructure, and has been formally approved by the Technical Committee.

This Standard has been developed in compliance with Standards Council of Canada requirements for National Standards of Canada. It has been published as a National Standard of Canada by CSA Group.

Notes:

- 1) *Use of the singular does not exclude the plural (and vice versa) when the sense allows.*
- 2) *Although the intended primary application of this Standard is stated in its Scope, it is important to note that it remains the responsibility of the users of the Standard to judge its suitability for their particular purpose.*
- 3) *This Standard was developed by consensus, which is defined by CSA Policy governing standardization — Code of good practice for standardization as “substantial agreement. Consensus implies much more than a simple majority, but not necessarily unanimity”. It is consistent with this definition that a member may be included in the Technical Committee list and yet not be in full agreement with all clauses of this Standard.*
- 4) *To submit a request for interpretation of this Standard, please send the following information to inquiries@csagroup.org and include “Request for interpretation” in the subject line:*
 - a) *define the problem, making reference to the specific clause, and, where appropriate, include an illustrative sketch;*
 - b) *provide an explanation of circumstances surrounding the actual field condition; and*
 - c) *where possible, phrase the request in such a way that a specific “yes” or “no” answer will address the issue.*

Committee interpretations are processed in accordance with the CSA Directives and guidelines governing standardization and are available on the Current Standards Activities page at standardsactivities.csa.ca.
- 5) *This Standard is subject to review within five years from the date of publication. Suggestions for its improvement will be referred to the appropriate committee. To submit a proposal for change, please send the following information to inquiries@csagroup.org and include “Proposal for change” in the subject line:*
 - a) *Standard designation (number);*
 - b) *relevant clause, table, and/or figure number;*
 - c) *wording of the proposed change; and*
 - d) *rationale for the change.*

CSA S16:19

Design of steel structures

1 Scope and application

1.1 General

This Standard provides rules and requirements for the design, fabrication, and erection of a broad range of steel structures based on limit states design approach. The term “steel structures” refers to structural members and frames that consist primarily of structural steel components, including structural steel acting compositely with concrete, and detail parts, welds, bolts, or other fasteners required in fabrication and erection. This Standard also applies to structural steel components in structures framed in other materials. The clauses related to fabrication and erection serve to show that design is inextricably a part of the design-fabrication-erection sequence and cannot be considered in isolation. For matters concerning standard practice pertinent to the fabrication and erection of structural steel not covered in this Standard, see Annex [A](#).

1.2 Requirements

Requirements for steel structures such as bridges, antenna towers, offshore structures, and cold-formed steel structural members are given in other CSA Standards.

1.3 Application

This Standard sets out minimum requirements and is expected to be used only by engineers competent in the design of steel structures. It applies unconditionally to steel structures, except that supplementary rules or requirements might be necessary for

- a) unusual types of construction;
- b) mixed systems of construction;
- c) steel structures that
 - i) have great height or spans;
 - ii) are required to be movable or be readily dismantled;
 - iii) are exposed to severe environmental conditions;
 - iv) are exposed to severe loads such as those resulting from vehicle impact or explosion;
 - v) are required to satisfy aesthetic, architectural, or other requirements of a non-structural nature;
 - vi) employ materials or products not listed in Clause [5](#); or
 - vii) have other special features that could affect the design, fabrication, or erection;
- d) tanks, stacks, other platework structures, poles, and piling; and
- e) crane-supporting structures.

1.4 Other standards

The use of other standards for the design, fabrication, erection, and/or inspection of members or parts of steel structures is neither warranted nor acceptable except where specifically directed in this Standard. The design formulas provided in this Standard may be supplemented by a rational design based on theory, analysis, and engineering practice acceptable to the regulatory authority, provided that nominal margins (or factors) of safety are at least equal to those intended in the provisions of this

Standard. The substitution of other standards or criteria for fabrication, erection, and/or inspection is expressly prohibited unless specifically directed in this Standard.

1.5 Terminology

In this Standard, “shall” is used to express a requirement, i.e., a provision that the user is obliged to satisfy in order to comply with the standard; “should” is used to express a recommendation or that which is advised but not required; and “may” is used to express an option or that which is permissible within the limits of the Standard.

Notes accompanying clauses do not include requirements or alternative requirements; the purpose of a note accompanying a clause is to separate from the text explanatory or informative material.

Notes to tables and figures are considered part of the table or figure and may be written as requirements.

Annexes are designated normative (mandatory) or informative (non-mandatory) to define their application.

2 Reference publications

This Standard refers to the following publications, and where such reference is made, it shall be to the edition listed below, including all amendments published thereto.
